## **NEW DUALIFT™ BY HEIL COMBINATION HOOK LIFT AND CABLE HOIST FOR ROLL-OFF CONTAINERS**

**Chattanooga, TN.** (June 13, 2011) — Heil Environmental has announced the launch of the new Dualift™ by Heil combination hook lift and cable hoist for quickly and efficiently unloading hook and cable roll-off containers.

The Dualift's innovative design offers unmatched advantages over conventional roll-off hoists. This revolutionary solution performs like two trucks in one to service both hook and cable containers with a single chassis, eliminating the worry of dispatching the wrong truck and saving time and money. The Dualift can load and unload containers faster than standard reeving operations, haul both standard containers and short hook containers, and power short containers to the rear of the frame before raising for additional safety. It accommodates roll-off container lengths of 12-24 feet, and 62-, 54-, and 36-inch lift bars.

The Dualift is an ideal solution for horizontally loading pup trailers, docks, and flatbeds. It features a standard 10-foot cable at the rear of the hoist for unmatched performance with tough pulls, offers the ability to hook containers at the lowest elevation in the business, and enables towing of containers with the hoist down when needed. The unit also features a unique shaking capability to easily empty difficult-to-remove cardboard or frozen loads. This innovative feature extends equipment life because drivers no longer need to move the truck in reverse and then slam the brakes to try to release the frozen load.

“Safety is one of the most important issues facing waste haulers today,” says Heil Sales Manager, Dick Williams. “Our customers expect us to develop products with safety foremost in the design process. The Dualift combination hook lift and cable hoist unit delivers top-notch performance and speed without sacrificing safety. When they get to see it in action, especially the shaking ability, operators can't stop talking about it.”
