Welcome to the Nextelligence Newsletter!

Welcome to the 29th edition of the Nextelligence Newsletter. We look forward to continuing to provide the latest news in the Nextelligence training community.

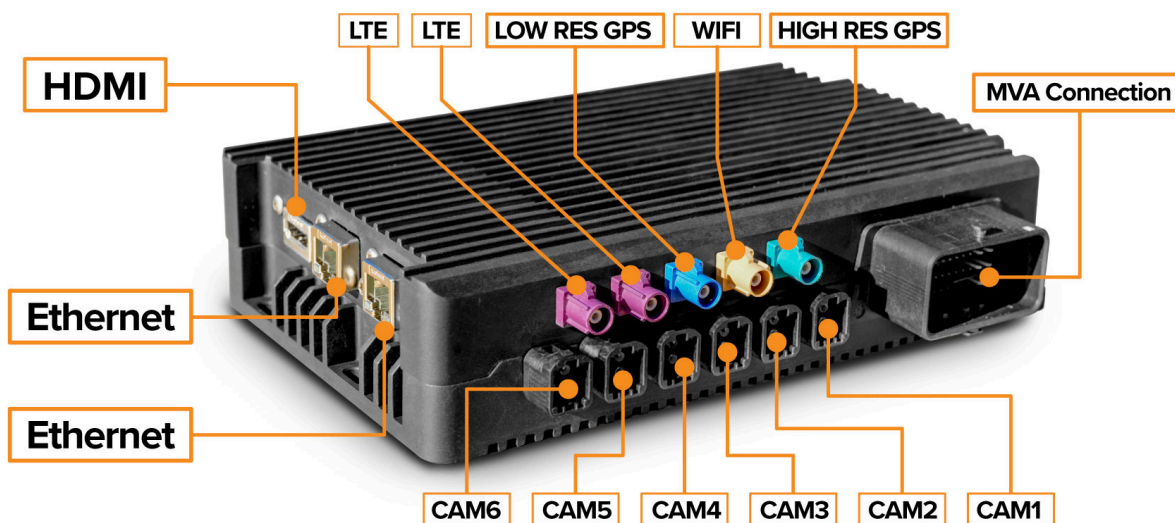

Nextelligence Tech Tips

From Master Trainer Travis Wallen

Connection Identification and Light Status on a 3rd Eye Digital G1 Gateway

The G1 Gateway has 15 connection ports and two status lights. In the first image below, we can see all 15 and point out their position.

HDMI Connection can be used to view live video streaming through the Gateway for each connected camera.

Ethernet Connections are optional for a window unit with driver-facing and forward-facing cameras.

LTE has two connections for the antenna and has two cellular networks.

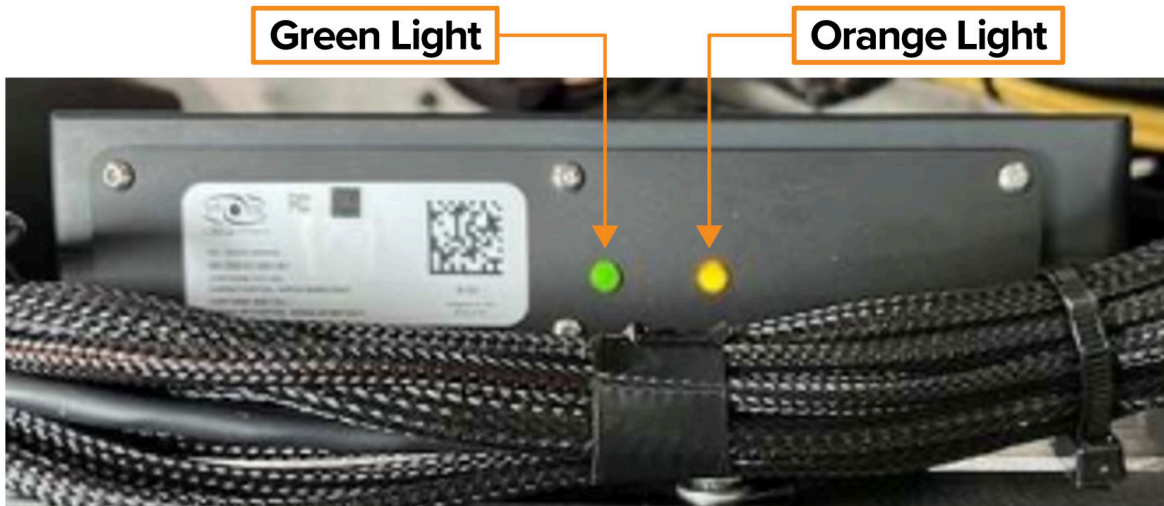

Low-Res GPS is for the standard low-resolution GPS module.

WIFI connects to the antenna and is for future WIFI expansion.

High Res GPS is for the high-resolution GPS puck.

MVA Connection is the motor vehicle adaptor.

The light status for the G1 Gateway is shown below.

When the power is turned on, both the green and orange lights turn on for a few seconds. Then the orange light turns off, and the green light blinks.

When the system is in this condition, it is ready. To confirm its status, connect to the microsite using the vehicle number and verify that the connection and GPS status are confirmed.

If the light status is in any other condition, you must go to the microsite to confirm operational status.

For more information on how to access the microsite, please contact support@3rdeyecam.com

Would you like to know more about camera systems, hydraulics, electrical systems, and related topics? Good news! We teach that in our Nextelligence MAT classes. You can get in-depth training by contacting us to register for a Nextelligence MAT class at: Nextelligence@terex.com
